ERIBER TEJEDA AMPARO

Developer FullStack Javascript

I am a dedicated person and a fan of programming and video games, I like to dedicate my free time to new projects and learn new technologies, and of course the occasional hour in front of the console to remove stress ("oh make it bigger sometimes")

WORK EXPERIENCE

Web Desing

Creation of responsive web pages, with HTML, CSS, Javascript and BootStrap if necessary.

FrontEnd

I have experience working on the FrontEnd with React.js working with Apis consumption, also connecting the FrontEnd with Node.js and also working with Firebase as a Database if it is not necessary to have a BackEnd in the App.

BackEnd

In the BackEnd area we will work with Express.js for the server, Ejs to use it as a template engine and display the data in the FrontEnd, Passport for authentication both locally and with Google.

Apis will also be created and consumed in the BackEnd to send them to the FrontEnd.

EDUCATION

Instituto Tecnico Superior Comunitario (ITSC)

Higher Tech. In Software Development
